COVID-19 Update
July 13, 2020
Road Map to COVID-19 Mitigation Strategy

- **Community Vaccination and/or Herd Immunity**
  - (70-80% of population has sufficient immunities) is Obtained.
  - Evaluate whether protective measures (non-pharmaceutical interventions) can be lifted.

- **Best Practices for Organizations**
  - Social Distancing, Environmental, Administrative Controls, Case and Contract Tracing.

- **Sufficient Health Care Capacity**
  - Ensure hospitals have resources to treat those with COVID-19 and non COVID-19 health care needs.

- **Robust Case Investigation and Contact Tracing**
  - Foundation to containment of the virus until a vaccine is available. Case investigation started immediately and all contacts are attempted to be contacted and put on quarantine within 24 hrs.

- **Enhanced Ability to Test**
  - Testing congregate care (jails, nursing homes, etc.), community wide testing, and testing of communities of vulnerabilities, businesses (all dependent on supply availability).

Percentage of Cases by Ethnicity:
- Non-Hispanic or Latino 50.8%
- Hispanic or Latino 23.3%
- Unknown Ethnicity 13.9%
- Native American 4.3%
- Asian 0.9%
- Multiracial 1.4%
- Other Race 0.7%

New Cases per Day:
[Chart showing new cases per day]

[Map showing cases by zip code]

[Graph showing COVID-19 number of cases by age]

[Other data and visualizations from the dashboard]
On average, each person in Michigan with COVID is infecting 1.22 other people. As such, the total number of active cases in Michigan is growing at an unsustainable rate. If this trend continues, the hospital system may become overloaded. Caution is warranted.
Note: As the country continues to learn more about COVID-19, this data will be updated and modified. What is important to note here is the Infection Growth rate is still above 1.0, therefore the spread is continuing.

ALLEGAN COUNTY, MICHIGAN

On average, each person in Allegan County, Michigan with COVID is infecting 1.19 other people. As such, the total number of active cases in Allegan County, Michigan is growing at an unsustainable rate. If this trend continues, the hospital system may become overloaded. Caution is warranted.

  - Mon. & Wed.
  - 1:00PM – 4:00PM

InterCare is also currently scheduling community testing events, sample cohorts listed below:

- Agricultural Camps, Apartment Complexes, Senior Living and Other Congregate Living Facilities
- Local Employers
- General Community Testing Events

For more information about scheduling an event, please contact Ryan Grinnell Director of Operations by e-mail at rgrinnell@intercare.org.
Upcoming Testing Events on Thursdays from 9:00am to 12:00pm in the following areas:

- July 16th: Wayland Union Schools; 870 E. Superior St., Wayland 49348
- July 23rd: Plainwell Middle School; 720 Brigham St., Plainwell 49080
- July 30th: Otsego Middle School; 540 Washington St., Otsego 49078
- August 6th: Allegan High School; 1560 Lincoln Rd, Allegan 49010

Individuals in need of transportation can call Allegan County Transportation (ACT) at (269) 673-4229 before 12:00pm the day before the desired event. There is no charge for transportation related to these testing events.

Don't Bring COVID-19 Home. Get Tested Today At No Cost.

Are you or is someone close to you sick or has symptoms? Do you work outside the home? You should get tested for coronavirus. There are many locations where you can get tested at no charge to you.

Call the COVID-19 Hotline at 888-535-6136, press 1.
COVID-19: REDUCE YOUR RISK
The more low-risk choices you make, the more protection you have from getting or spreading COVID-19.

**SAFEST**

- Face Covering: Everyone is wearing a mask or face covering.
- Social Distance: Not engaging in any activity in person; virtual only.
- Droplet Spread: Breathing normally.
- Location: Outdoors in an open space.
- Food: Only bringing and touching your own food.
- Groups: Only household members.
- Travel: Not traveling outside of local community.

**RISKIEST**

- Face Covering: None wearing masks.
- Social Distance: Standing face to face, hugging, shaking hands.
- Droplet Spread: Coughing or sneezing.
- Location: Staying under a shelter (gazebo, covered porch) outdoors.
- Food: Serving pre-portioned food, using good hand hygiene.
- Groups: Large groups over 10 people.
- Travel: Using own vehicle for traveling.

**ALWAYS REMEMBER**

- Washing hands well and often reduces risk in all situations. If you don’t have soap and water, use a hand sanitizer that contains at least 60% alcohol.
- Stay home if you’re feeling any mild symptoms, except to get medical care.

The COVID-19 pandemic poses some unique challenges in terms of traveling that are important to note, such as the type of transportation, non-pharmaceutical practices while traveling, and the position of the employee traveling. Because travel increases your chances of getting infected and spreading COVID-19, staying home is the best way to protect yourself and others from getting sick.

**STEPS TO TAKE AT THE WORKPLACE**

- Monitor [www.cdc.gov/travel](http://www.cdc.gov/travel) for recent travel health advisories.
  - The travel location may have a higher rate of transmission, which would increase the risk for individual.
- Reconsider Travel Plans
  - If traveling can be postponed until a later date, this would be the safest option for the individual.
- Determine what type of transportation will be used
  - Air travel requires spending time in security lines and airport terminals, which can bring you in close contact with others. Whenever possible, it is recommended to travel on the same flight if possible. Air travel is difficult on crowded flights, and you may have to wear masks (within 6 feet) sometimes for hours. You may increase your risk for exposure to the virus that causes COVID-19.

**SAFEST**

- You may have to stop less often for food or bathroom breaks, but RV travel typically means staying at RV parks overnight and getting gas and supplies at other public places. These stops may put you and those with you in the RV in close contact with others.
- Making stops along the way for gas, food, or bathroom breaks can put you and your traveling companions in close contact with other people and surfaces.

**RISKIEST**

- Practice and enforce Non-pharmaceutical interventions.
  - If an individual chooses to travel, educate on non-pharmaceutical practices the individual can do while traveling.

**SAFEST**

- Air travel requires spending time in security lines and airport terminals, which can bring you in close contact with others. Whenever possible, it is recommended to travel on the same flight if possible. Air travel is difficult on crowded flights, and you may have to wear masks (within 6 feet) sometimes for hours. You may increase your risk for exposure to the virus that causes COVID-19.

EMployers: Understanding COVID-19 Transmission and Close Contacts

One of your employees was diagnosed as a confirmed or probable COVID-19 case. What should you do?

1. Contact the Local Health Department based on the employee’s residence and, additionally, based on the location of any exposed workplace facilities. Sometimes there are delays in lab results or surveillance.

Confirmed or Probable COVID-19 Case

Identify close contacts

1. Look at operations flow and determine close contacts of the confirmed or probable case.
   a. A close contact is considered someone closer than 6 feet together for 10 or more minutes within 48 hours prior to positive case’s symptom onset or a positive test result.

What should close contacts do?

2. Close contacts should quarantine for 14 days and monitor symptoms daily.
   1. Some individuals may want to get tested right away for various reasons. Public Health recommends to wait until the viral load increases, which is estimated to be 5 days post exposure.
   2. If symptoms develop, they should get tested immediately.
   3. Close contacts can return to work once quarantine period is complete.

Frequently Asked Questions

I was around a close contact of a confirmed case. Should I get tested right now?

If you pick up a virus, such as COVID-19, it takes about 3-5 days for the viral load to be high enough to be positive on a diagnostic test. In this case, only test if you develop symptoms.

Contacts of a close contact: Individuals who have been around identified close contacts of a confirmed/probable case prior to the close contact being quarantined.

What to do

- Go about life as usual
  - Practice mindful distancing from others
  - Wear a face mask
  - Clean and disinfect highly touched surfaces
  - Practice frequent handwashing
  - Self-check for symptoms

When your situation would change

- If the close contact tests positive and you’ve had close contact (closer than 6ft together, 10 or more minutes) within 48 hours (2 days) prior to their positive test, you should quarantine.
- If the close contact begins to develop symptoms and you’ve had close contact with the individual within the last 48 hours, you should quarantine.

When is the right time to get tested?

COVID-19 is a novel virus. We are still learning many issues around this virus. As Michigan has expanded testing capacity, anyone can get tested for coronavirus. However, if you are concerned about a potential risk of exposure, it’s important to test at the right time to properly connect you to the epidemiological links of the virus. It takes about 3-5 days on average for the viral load in the body to be high enough to show a positive result on a diagnostic test. If you are going out in to public, it is important to monitor your symptoms daily.

What’s the proper personal protective equipment (PPE)?

Refer to your Employer’s COVID-19 Preparedness and Response Plan for the PPE to be worn at work. The more often you practice COVID-19 mitigation strategies (handwashing, social distancing, wearing face coverings) the risk of COVID-19 transmission goes down.

Spectrum Health Visiting Nurse Association partners with businesses and organizations across West Michigan to provide flu shots in the community via On-Site Clinics.

Below are some of the benefits of working with us:

- No initial costs to companies
- Convenient appointment times
- Skilled nursing staff administer quadrivalent vaccines at your location
- Billed directly to your insurance provider and/or your company
- Ability to accommodate companies with a minimum of 15 staff members in the West Michigan area
- Potential to reduce sick days and loss in productivity
- Promotes healthy lifestyles for your staff
